species ***IB.*** *rubicundus* at any rate has an absolutely as well as a relatively greater length of intestines and caecum than any other American Monkey known.

Not the least remarkable fact about these Ouakari Monkeys is their distribution in South America. **"We** cannot do better than

FIG. 267.—White-nosed Saki. *Pithecia albinasa.* ×⅓.

2 O **quote the summary given by Messrs. P. L. and "W. ~L. Sclater in their *Geography of Mammals,* which is as follows: "Each of them, as first shown by Bates and afterwards further explained by Forbes, is limited to a comparatively small tract of forest on the banks of the Amazon and its affluents. The Black-headed Ouakari (J?. *melanoce^alus)* . . . is met with only in a tract**
